4. Application Name

Buff Bites

5. Application Description

A CU specific online menu replacement for the current Nutrislice app. Primary features would include being able to view menus by dining hall, sort and filter by multiple attributes, and view menus across a larger timeframe like a week or month. The current online menu system only allows viewing one station at a time and forces you to view different pages. We would consolidate this information to be more easily viewable.

The application would also have an account feature that lets you favorite halls and items. The user would be notified when items they favorited would be available. We would also allow users to search for specific items, something which the current system does not allow.

6. Audience

Our target audience is CU students. We are trying to make viewing menus easier and giving users the ability to check when their favorite items are available.

7. Vision Statement

To make sure no Buff has to guess what's for dinner.

8. Version Control

https://github.com/InasSiddique/3308-Team-4-Group-Project.git
Submitted on canvas.

9. Development Methodology

Agile Methodology

10. Communication

Our team plans on using Discord for communication.

11. Meeting Plan

Team meetings are once a week on Fridays at 3:00 via Zoom. Weekly meetings with the TA could be on any day at 4:30 PM (day and Modality/location depend on the TA)

Extra Credit

1.

Risk: Incorrect authorization leading to leaked personal information
Severity: High
Mitigation: Authentication on http routes

2.

Risk: Storing passwords in plaintext rather than hashing.
Severity: High
Mitigation: Can be mitigated by hashing passwords.

3.

Risk: Competition from already existing apps
Severity: Medium
Mitigation: We can differentiate our website/app by focusing on features that Nutrislice lacks and make it easier to use for our users

4.

Risk: Incorrect data being used on the application
Severity: High
Mitigation: Report button that the food is not correct on the app.

5.

Risk: Low User Engagement
Severity: Medium
Mitigation: Advertise through campus groups/clubs and at the dining halls. Make it accessible to everyone. Advertise during orientation/tours.
